About this report

This open peer review (OPR) report shows the public comments made on this article during peer review, by the reviewers, the associate editor and the editor-in-chief, for every revision round, together with the authors' replies. Comments appear only with the consent of the people who wrote them. Reviewers who chose to sign their report are named; the others are shown as "Referee". Comments are edited for language only, and confidential remarks to the editors are not included.

Referee 1 Reviewer

MINOR REVISION 19 Aug 2022

In this study, the authors aimed to investigate the effect of B12 and folic acid on primary nocturnal enuresis. In the discussion, the mechanisms of action of these vitamins are insufficiently detailed.

Referee 2 Reviewer

MINOR REVISION 14 Nov 2022

The article is within the scope of the journal.
The title reflects the content appropriately.
The abstract is structured, and the keywords are selected from MESH. In the background section of the abstract, the word "complication" is not appropriate, and it is better to say "diseases".
The introduction includes aims.
Materials and Methods describe the selection of participants.
The sample size is small, and another study with a bigger sample size is recommended.
The tables are appropriate.
The results and findings are important.
The analysis supports the conclusion.
There are not enough recent references, and many of the references are not relevant to the topic "Folic acid and vitamin B12 deficiency".

AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

Dear editors,

We would like to thank the editors regarding the valuable comments; the following items were corrected as follows:

Best regards

Reviewer 1:
In this study, the authors have aimed the effect of B12 and folic acid on primary nocturnal enürezis. In discussion, detail of mechanism of these vitamines is insufficient.

Discussion was revised.

Reviewer 2:
The article is within the scope of the journal.
The title reflects the content appropriately.
The abstract is structured and keywords selected from MESH. In abstract in background section the word "complication" is not appropriate and it is better to say "diseases"

It was corrected.

The introduction includes Aims.
Materials and Methods describe the selection of participants
The sample size is small and another study with bigger sample size is recommended.
The tables are appropriate.
The results and findings are important
Analysis is supports conclusion
There not enough recent references and also many of references are not relevant to the topic "Folic acid and vitamin B12 deficiency"

***Discussion and references were revised**.*
