

Laboratory News

Fortunately in recent years in parallel to expansion of hepatitis centers in Iran, other facility in diagnosis and follow-up the patients improved too. Today there is a good facility in 'Keyvan and park clinic laboratories for detection of genotyping of HCV by RFLP and Dot Blot assay , Quantitation of HCV and HBV by Roche Amplicor and HBV quantitation By Light cycler and HCV quantitation By Colimatric method. There is another facility in research for YMDD detection and Sequencing for Different HBV Mutations. We hope to expand these facilities to other major cities of IRAN soon.
