Appendix 2. The predictions of the smoothed spline for two methods. In each panel, there are two plots including (Blue) Speeding, (Red) unsafe distance and two statistical methods. The x-axis is the hour in a day for March-April month and the y-axis is the prediction from the model.

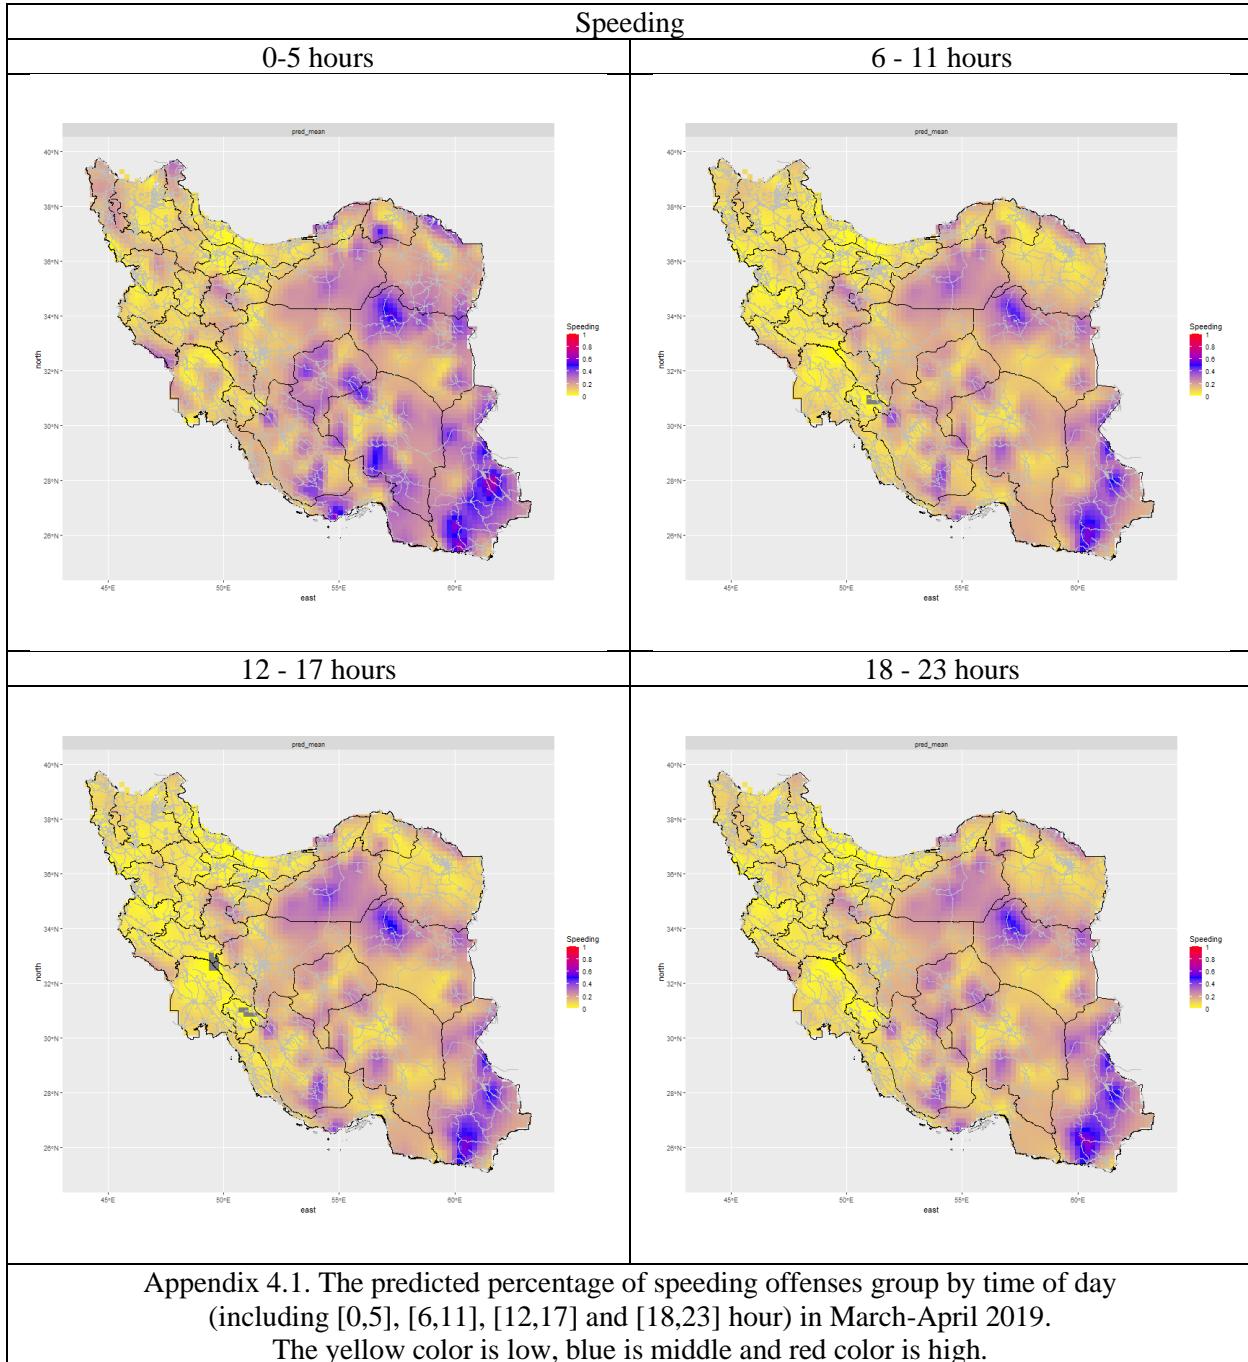

Appendix 3. Comparisons between two mesh methods group by traffic offenses.

Appendix 3. The triangulated Mesh (left), the Non-Convex Boundary Mesh (right) with red dots are count stations spread the country, the predicted percentage of speeding offenses and unsafe distance offenses.

The yellow color is low, blue is middle and red color is high.

Appendix 4.1. Comparisons between four times of the day of predicted percentage for speeding offenses with mesh triangulated.

Appendix 4.2. Comparisons between four times of the day of predicted percentage for unsafe-distance offenses with mesh triangulated.
