Abstract

In this session, we will discuss 7 cases in pediatric musculoskeletal field. These cases will include different aspects of bone and MSK disorders in pediatrics such as bone tumors (benign and malignant), bone involvement in metabolic and hematologic disorders, infectious diseases and soft tissue vascular lesions. During this session, we will ask some volunteered radiology residents to explain the radiological findings and deliver their differential diagnosis. Then, they will discuss the case interacting with the audience who will also comment on the topic and finally the confirmed diagnosis that will be offered and discussed in more depth.

This is an abstract presented in the 33rd Iranian congress of radiology (ICR) and the 15th congress of Iranian radiographic science association (IRSA).
