Appendix 4. Gel image of multiplex PCR products, from left, Lane 1: 100 b.p. ladder, Lane 2: positive control, topmost amplicon for identifying *Staphylococcus* genus by 16S rRNA gene of 597b.p., middle amplicon *femA* gene of 450 b.p and the lowermost amplicon *meca* 279. Lane 3 to 9 samples, Lane 4,5,6 and 9, confirms the presence of *S aureus*. (note: we got phage against isolate W1, 16S rRNA sequencing was done for this isolate.)
