Appendix 2. Characteristics of the Studies on Impact of Telemedicine for Improving Women's Sexual Satisfaction

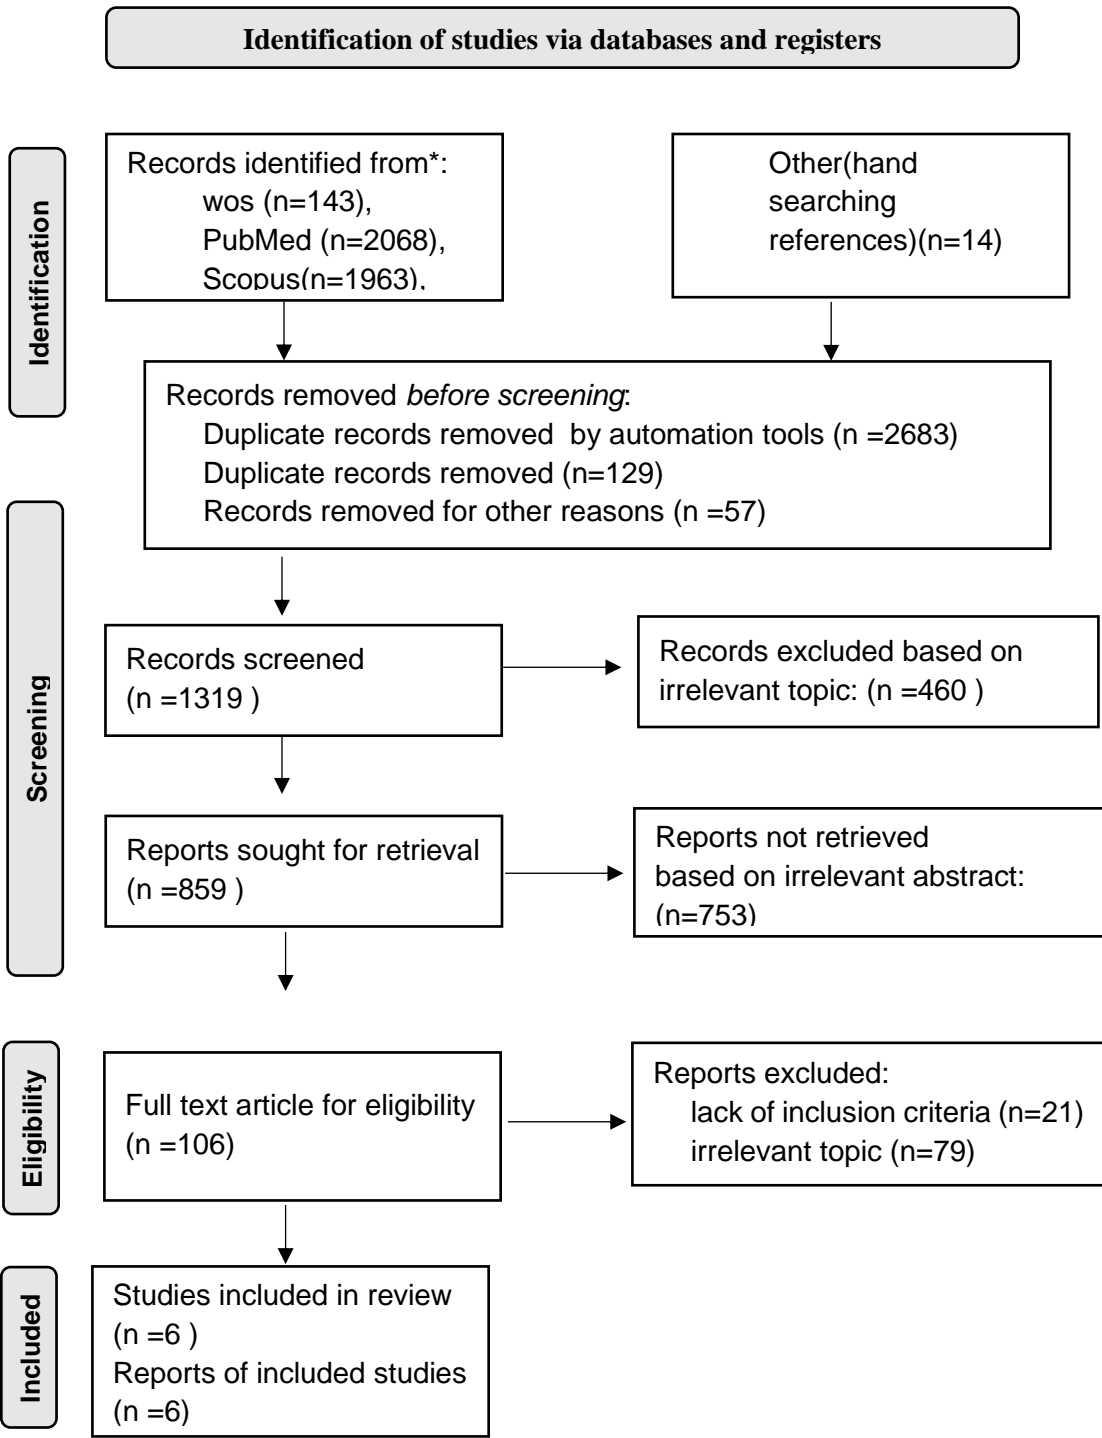

Author names	country of research	year publication	Study Design	Disease Type	target population	intervention	method	main findings
Alice Hucker(3)	Australia	2015	RCT	sexual dysfunctions	Women with multiple sexual concerns	The online CBT program consisted of three key components: psychoeducation, sensate focus exercises, and a mindfulness-based psychoeducational program	Chat Groups, e-mail, contact with a therapist, Pursuing Pleasure (PP website)	Women who completed the PPP program exhibited significantly greater improvements in measures of sexual desire (libido), sexual arousal, orgasmic function, and overall satisfaction compared to the waitlist control group
Lori A. Brotto(2)	Canada	2017	quasiexperimental	sexual dysfunctions	Individuals with a history of colorectal and gynecologic cancer		Not reported	The intervention resulted in significant improvements in women's libido, arousal, lubrication, satisfaction, and overall sexual performance, as measured by the relevant assessment tools. These improvements were sustained for a follow-up period of 6 months

Susanna B. Hummel (4)	Netherlands	2017	RCT	sexual dysfunction	Individuals with a history of breast cancer	(iCBT typically incorporates several components: standardized psychoeducational materials, therapist-assigned homework exercises, self-monitoring reports submitted to a sexologist, and therapist feedback on those reports	e-mail, telephone	Investigating the Efficacy of iCBT) for Addressing Sexual Dysfunction, Body Image Concerns, and Menopausal Symptoms in Breast Cancer Survivors
Lori A. Brotto(1)	Canada	2022	quasiexperimental	sexual dysfunction	Women with Female SIAD	Online Mindfulness	Website	The effectiveness and practicality of online mindfulness interventions
Fatemeh Hamidi(5)	iran	2023	RCT	sexual dysfunction	women with breast cancer	social network-based supportive program	Social network (WhatsApp)	The usefulness and effectiveness of the support program of social networks on the sexual performance of women with breast cancer
Kyle R. Stephenson(6)	Canada	2023	quasiexperimental	sexual dysfunction	women without SA history	Online MBT/CBT	Self-Directed E-learning Program	The online intervention program was beneficial in each group

iCBT= Internet-based cognitive behavioral therapy; SIAD= Sexual Interest/Arousal Disorder
