Received for Publication: July 19, 2008, Accepted for Publication: July 19, 2008.

Case Presentation:

The patient is a 40 year old man a case of acute myelomonocytic leukemia AML M4 (CD13+,CD33+,CD14+) who received induction of remission by 7; 3 (cytarabine 100 mg/m² and Idarubicin 12mg/kg) regimen, he also received 5;2 (cytarabine 100 mg/m² and Idarubicin 12mg/kg) as consolidation treatment. He was candidate for allogenic stem cell transplantation from HLA matched sibling but a few days after consolidation chemotherapy developed generalized erythematous raised skin papules that became confluent in some areas. Skin biopsy was taken.
