About this report

This open peer review (OPR) report shows the public comments made on this article during peer review, by the reviewers, the associate editor and the editor-in-chief, for every revision round, together with the authors' replies. Comments appear only with the consent of the people who wrote them. Reviewers who chose to sign their report are named; the others are shown as "Referee". Comments are edited for language only, and confidential remarks to the editors are not included.

ACCEPT 5 Jul 2024

In my opinion, this article could be acceptable after a careful check of the English writing.

Associate Editor

MINOR REVISION 5 Jul 2024

The authors investigated the antiproliferative and pro-apoptotic activities of the leaves of Tournefortia mutabilis Vent. on the Human Breast Adenocarcinoma (MCF-7) Cell Line. They investigated cell viability and caspase activation. As an investigation of a new source for finding new drugs, the study is novel, and the current format is suitable for acceptance in the IJPR journal. I suggest that the manuscript be checked for grammatical and typographical errors before publication.
