OPEN PEER REVIEW

Open Peer Review (OPR)

As a new feature for progressing towards transparency, we decided to open a new window for all of our editors as well as authors titled "**Open Peer Review**". We hope by this new facility, our reviewers will be more motivated and authors will be more satisfied with the review process. We believe that publishing our peer review reports could make a transparent and clear environment for all our efforts within a journal, but not all reviewers tend to publish their comments.

What is "Open Peer Review" process?

An "Open Peer Review" process is making the details of all review process (including reviewers, associate editors, and EICs comments) as "Public" as it is agreed by EIC, Authors, and reviewers.

Advantages of "Open Peer Review" process

- More transparency, constructiveness and tactful comments of the peer review process: leads to an increase in the quality of reviews
- More motivations for all involved roles in the review process
- Authors' satisfactions from the review process: Increases honesty between authors and reviewers
- Education of both authors and new students
- Prevents reviewers from following their individual agendas and leading to the detection of reviewers' conflicts of interests

Peer Review Report for "Improving the Outer Shell of the Form Using the Characteristics of Human Skin"

Author(s): Faezeh Tafreshi, Babak Alemi

Review Timeline:

Submit Date: 9 May 2020
Revised Date: 5 Jul 2020
Accepted Date: 5 Jul 2020

Revision (0)

Here, you can see the **Reviewers**, **Associate Editors** and **EICs'** comments from the beginning to the end of the revision process.

REFEREE: Reviewer | Revision (0) — 30 May 2020

Dear AE,
Although the idea of this manuscript is interesting, it is not a Scientific study.
Thanks.

Mehrak Zare: Reviewer | Revision (0) — 1 Jun 2020

Dear AE,
Comments for the authors:
- The concept of your manuscript is novel and multidisciplinary.
- There are lots of grammar mistakes that were corrected and mentioned in the attached word file.
- Please rewrite and revise your manuscript according to the comments.
- Although there are not enough references, because of the architectural concept of the manuscript this shortage can be neglected.
Thanks.

REFEREE: Associate Editor | **Revision** (0) 5 Jun 2020

Dear EIC,
The manuscript needs major revision.
Thanks.

REFEREE: EIC | **Revision** (0) 5 Jun 2020

Dear Author,
Your article is reviewed by the reviewers carefully. According to their comments, this document needs major revision. Please follow their comments as requested.
Thanks.

OPEN PEER REVIEW

Revision (1)

Reply to Reviewers

Ideally, the reviewing process can significantly improve the submitted manuscripts by allowing the authors to take into account the advice of reviewers. Author(s) must reply to all reviewers' comments in a separate Word file, point by point. A "**Reply to Reviewers**" document is submitted along with revised manuscript during submission of revised files, summarizing the changes that the authors made in response to the reviewers' comments. The responses to reviewers' comments specifies how the authors addressed each comment the reviewers made.

You can read the authors' responses to the reviewers' comments in the next page.

Q: Please explain about Voronoi pattern.

R: The Voronoi pattern consists of a spatial space filled by continuously discrete convex polygons without overlapping. It is the same as the squamous cells pattern. The pattern can be applied in two-dimensional and three-dimensional drawing and was discovered by the Italian mathematician Veronoi.

Q: What do you mean by residents.

R: Applying Voronoi pattern, as a model for structural and architectural design, can eliminate problems such as loss of comfort of residents, destruction and corrosion of structural and non-structural elements, energy consumption for ventilation, etc

Q: Please correct the explanation for adaptability patterns.It is not clear what you mean?

R: it means the ability to change mode for adapting to the new conditions while considering the least changes in optimal conditions.
