About this report

This open peer review (OPR) report shows the public comments made on this article during peer review, by the reviewers, the associate editor and the editor-in-chief, for every revision round, together with the authors' replies. Comments appear only with the consent of the people who wrote them. Reviewers who chose to sign their report are named; the others are shown as "Referee". Comments are edited for language only, and confidential remarks to the editors are not included.

AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

Dear Journal and Reviewer,

We would like to thank you for your valuable comments to improve the quality of our manuscript. Here're some of our explanations for these comments:

Reviewer 1: Thanks to the respected authors,

1- The text requires revision in terms of spelling and punctuation.

We have revised our whole manuscript for spelling and punctuation.

2- It is essential to clearly outline the scientific background, provide fundamental explanations, and justify the differentiation of your research from other similar methods and articles.

The issue we researched still has some controversy. We have added some arguments in the introduction section (red text).

3- The sample size, age range, and other pertinent factors are insufficient for citation.

Our study is a single-center study. We included all patients undergoing dialysis in the study who met inclusion and exclusion criteria. Therefore, there will be limitations as the reviewer has stated. We would like to include these issues in the limitations section.

4- In the discussion section, it is recommended to augment the number of recent similar articles referenced.

We have added the results of some recent studies to the discussion section.

We would like to sincerely thank the journal and reviewer for their generosity and valuable comments to improve our manuscript further. We will receive the reviewers' helpful comments and actively correct our manuscript to meet the journal's requirements.
Sincerely,

2 Revision 1
