Revision 1

AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

In this study, the effect of creatine and ginseng on the performance of male fencing national team has been investigated. The study has many strengths that can be pointed to the innovation and practicality of the study. However, some things should be corrected.

Title

It is better to change the title as follows:

Comparison of creatine supplementation and sexing on aerobic, anaerobic power and muscle strength of male players of Iran's national Epe (corrected)

Abstract

Correct the writing of p-value in the abstract(P=0.05)(corrected)

Write group instead of category.(corrected)

The p-value should be written in the results report of the abstract section

In conclusion, the words aerobic control and anaerobic control should be changed to aerobic and anaerobic power(corrected)

Methods

The word placebo is used in the method section. while information is provided in the placebo group. It is written that one group received creatine and the other group received ginseng.(corrected)

The creatine and ginseng producing company should be presented in the methodology section.(corrected)

How to measure aerobic and anaerobic power and muscle strength should be written in detail.(corrected)

The statistical model should be changed to covariance analysis. The t-test is not suitable for this research design.(corrected)

In Table 1, the information is presented based on the average and standard deviation, and the table is drawn based on the pattern of scientific articles. (corrected)

Tables 2 to 9 should be deleted. Instead, a descriptive table or figure should be used and the information obtained from the subjects should be reported based on the average and standard deviation.(corrected)
