About this report

This open peer review (OPR) report shows the public comments made on this article during peer review, by the reviewers, the associate editor and the editor-in-chief, for every revision round, together with the authors' replies. Comments appear only with the consent of the people who wrote them. Reviewers who chose to sign their report are named; the others are shown as "Referee". Comments are edited for language only, and confidential remarks to the editors are not included.

AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

Greetings to the respected reviewers

All revisions were made in the main file.

Regarding the statistical sample size: given the number of participants available and those who met the inclusion criteria of the study, this is the number; the relatively long duration of the training period may be one of the reasons justifying this.

With thanks

AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

In the name of God

With greetings and respect to the respected reviewer, and thank you for your careful attention

Based on the correspondence that took place, regarding the statistical approach, analysis of covariance, or ANCOVA, was chosen so that the pre-test values would also be taken into account, and all assumptions were checked. Regarding the two data items weight and HDL, yes, because the numbers had not been entered correctly in SPSS, the values were .re-examined and corrections were made

Thank you for your cooperation
