AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

Dear editor

I don’t have require consulting with statistical specialist , because i have performed statistical analyses correctly (ANOVA with repeated measure and Bonferroni post hoc tests were used to examine the differences between variables in resting position, post-exercise, and after correction for the volume of plasma lost) furthermore, the data distribution of our manuscript was normal, and we didn’t use nonparametric tests!! Finally, p-value 0.000 can be replaced with p<0.0001, and I replaced them. And I have highlighted significant results of ANOVA with repeated measures and Bonferroni post hoc tests in figures.

In addition i mentioned title for each Figure. And mentioned all Figures in the text.

Thanks for your consideration

Kind regard

Sara zare karizak
