About this report

This open peer review (OPR) report shows the public comments made on this article during peer review, by the reviewers, the associate editor and the editor-in-chief, for every revision round, together with the authors' replies. Comments appear only with the consent of the people who wrote them. Reviewers who chose to sign their report are named; the others are shown as "Referee". Comments are edited for language only, and confidential remarks to the editors are not included.

MAJOR REVISION 20 Sep 2021

Dear Sir/Madam

First, I would like to thank you for your kindness in sending me this review.

This manuscript is well written, but please consider these points:
1. The title is too long and unattractive!
2. The abstract is not written appropriately for the context of the study, especially its results section.
3. There are a few grammatical errors and writing issues (RUT in line 146...).
4. The study method is not clear; do you perform a serological assay after a positive RUT?
5. As you stated, many of the RUT results were negative in the histological study! Is this acceptable in your practice?
