About this report

This open peer review (OPR) report shows the public comments made on this article during peer review, by the reviewers, the associate editor and the editor-in-chief, for every revision round, together with the authors' replies. Comments appear only with the consent of the people who wrote them. Reviewers who chose to sign their report are named; the others are shown as "Referee". Comments are edited for language only, and confidential remarks to the editors are not included.

AUTHORS' RESPONSE TO REVIEWERS

Authors' reply to reviewers

The next pages contain the authors' point-by-point reply to the comments of this revision round, as submitted with the revised manuscript. It is published as the authors wrote it.

In the name of the Most High

With greetings and respect

In accordance with the respected reviewers' comments, changes were applied to the text of the article as far as possible.

The first reviewer's comment is valid that it would have been better to divide the embryos of one mother into two parts, biopsied and non-biopsied. However, since all embryos of infertile patients requesting sex determination who refer to the infertility center undergo PGD, the study was not possible in this way.

Regarding the second reviewer's comment about appropriate parameters for implantation, which is not within my field and about which I have no knowledge, I was unable to add material, because infertile patients referring to the infertility center are treated by an obstetrician-gynecologist, and the preparation before embryo transfer is carried out by them.

With thanks
